

## iPAY® Global Online Payment Processing

# Payments Simplified

With over 10 years of experience, Planet Payment's iPAY gateway offers reliable PCI compliant payment solutions for e-Commerce, call center, mail-order and telephone order merchants. Explore the many ways that iPAY's payment intelligence can work for you.

### Payment Gateway for Credit, Debit & Electronic Check (ACH) payments

- Supports all major credit and signature debit cards including Visa, MasterCard, American Express, Discover, and JCB
- Allows customers the option to pay by check, ACH and direct debit from their bank accounts
- Certified for government and utility online bill payments

### Payment Solutions Portal (PS Portal)

Our secure, web-based virtual terminal, PS Portal offers complete online payment functionality with no integration required. Manage transactions in real-time or via batch processing, configure your account settings, and generate online reports from a single platform.

### Recurring Billing and Subscription Management

Manage subscription billing and customer notices in real-time through PS Portal. Add your customers' payment and billing information, define payment schedules, offer trial periods, and track many other billing parameters. PS Portal handles the rest, generating subsequent transactions based on the schedule provided, and sending customer alerts as defined.

### Customizable Hosted Payment Pages

Allow your customers to purchase your products and services in any quantity using our hosted payment form. Simply enter appropriate product information, and HTML code is created to insert into your Web site.

### Multicurrency Pricing

Target new international markets and increase global sales when your international customers view pricing and pay in the currency they know best – their own! Available in over 60 currencies, this service offers you the convenience of US dollar settlement and reporting.

### Retail Merchants Payment Processing

Now, if you operate a retail store, you too can leverage the iPAY gateway to authorize credit card and/or check/ACH payments over the internet! Simply enter transactions into the PS Portal or add an inexpensive card swipe reader to any computer to harness the speed and security of the internet. Card-present point-of-sale providers can also integrate to the iPAY gateway to securely process your customers' payments over the internet.

### iPAY Secure Token™

With our iPAY Token service, merchants can facilitate PCI compliance when they no longer store customers' sensitive card details. We will generate random, unique tokens for each customer and for each of their credit or electronic check payment accounts. Merchants simply submit this token each time their customer makes a return purchase or payment.

### Getting Started

Quickly launch your payment processing tomorrow with no integration through our PS Portal, and allow us to manage your specific payment processing needs.

Or, customize your ecommerce or mail/telephone order application by coding directly to our XML-based Application Payment Interface (API).

We also help businesses integrate your payment processing with your other enterprise applications, including accounting and customer-order management systems. Our integration specialists and extensive library of development tools are available to assist you with this integration.

Explore the possibilities. Tap into iPAY and learn how we can help you grow your virtual business.
